

Did you know your doctor offers the revolutionary Nitrouseal® process to minimally sedate you and reduce pain and anxiety during a wide range of procedures conducted in his/her office? Nitrouseal® allows you to safely inhale nitrous oxide, a minimal sedative used in dentistry for decades. It works quickly (in as little as 30 seconds), eases pain and anxiety associated with many procedures, and is safe enough to use on infants. When the nitrous is turned off, you are clear-headed in seconds. Ask your physician if Nitrouseal® is right for you.

### Benefits of Nitrous Sedation:

- **ANALGESIA/SEDATION**  
Reduces pain and significantly improves the experience of in-office procedures for the patient. Patients can still respond verbally throughout the procedure.
- **ANXIETY RELIEF**
- **EXTREMELY RAPID ONSET AND OFFSET**  
Patients can safely walk out of office soon after the procedure.
- **SAFE AND EFFECTIVE**  
Studies prove safety and efficacy in millions of dental patients without complications.
- **LOW COST**

### Possible Side Effects Include:

- **NAUSEA/VOMITING**  
This occurs in 2% of the population.
- **B12 DEFICIENCY**  
B12 supplements are recommended for individuals who already have this deficiency.
